+ Summary

As a Seattle based web developer, I strive to create distinctive web-based solutions presented through a creative and functional front end. My pride in clean, efficient code motivates me to constantly learn and improve as a developer. Outside of web development, you'll often find me hiking, tinkering with electronics, or working on old Audis.

+ Experience

General Assembly

Web Development Immersive Student

Seattle, WA

Nov 2015 to Feb 2016

Full time student, 50-70 hours per week, studying web development. Worked on and completed full stack web applications in teams and individually.

Tech Used: Node.js, express.js, HTML5/CSS3, Rails, jQuery, Postgresql, MongoDB, Angular.js, Git

Topics Covered: Databases, APIs, Agile Methodologies, Presentation Skills, Research Methods, Computer Science

Heartland Automotive Services

Assistant General Manager

Bellingham, WA

Sep 2011 to Oct 2015

Maintained a high level of service and quality while managing a team during the successful service of 5000+ cars.

Managed inventory, and employee scheduling.

Developed training methods for large groups of personnel during a large scale new service rollout.

Explained technical automotive concepts to customers.

Liberty Bottleworks

Powder Coating Tech/General

Yakima, WA

Spring 2011 to Fall 2011

Worked in a small team helping with technical and operational decisions during the fine tuning period of a new innovational company. Planned modifications of equipment and machinery for powder coating multiple sizes of aluminum water bottles.

+ Education

General Assembly

Web Development Immersive Student
500 + hours of instruction, coursework, and projects covering full stack web development.

Whatcom Community College

AAS Computer Science 2015

Completed an AAS degree with a direct transfer agreement to Western Washington University for a computer science major.

+ Projects

Bar Roulette

IOS/Android hybrid mobile application where users select a location and radius on a map where they would like to visit a bar. A bar that is currently open is selected at random. The user is presented with options and trip information for taking an Uber, walking, or driving. All transportation selections launch the appropriate application with the destination information.

Tech Used:

Ionic/Phonegap (Previously React-Native)

Firebase

Google places API

Uber API

Movie Browser

Movie Browser is a web application where users are able to: search for movies, view specific information about movies, find out if the movie is on netflix, access direct magnet links for the movie, add favorite movies and view list of movies inspired by their favorites.

Tech Used:

Node.js

Express.js

PostgreSQL

TMDB API

Netflix Roulette API
